More particularly, the present invention relates to a screen capable of effectively maintaining uniformity of brightness and preventing uniformity of brightness from deteriorating when a cathode ray tube using the screen is operated for a long period of time. 2. Description of the Related Art Generally, a cathode ray tube includes a panel having a phosphor screen formed thereon and a funnel having a bulged portion at the front end thereof. A shadow mask is arranged in the bulged portion and a portion of the shadow mask is opposed to the phosphor screen. The color-selected electron beams emitted from an electron gun collide with the phosphor screen and thereby cause the phosphor screen to be excited to emit light. The shadow mask prevents color mixture or mis-color mixture of the phosphor screen and prevents a miss-color mixture and a miss-color mixture which occurs due to
